

SparkSocial — Test Plan

One page of cases. Each one names the goal it proves, one thing to do, and one result to look for.
Work top to bottom and mark each row.

Goals under test are PRD §5's six: **G1** autonomous publishing · **G2** configurable oversight · **G3** trend-driven growth · **G4** automation at scale · **G5** engagement intelligence · **G6** governance everywhere.

Personas are PRD §3: **A** solo SMB owner · **B** agency operator · **C** creator/coach · **D** sales-driven brand.

Before you start

API	<code>http://localhost:8080/health</code> returns <code>status: ok</code>
Web	<code>http://localhost:3000</code> loads the sign-in page
Migrations	<code>npm run migrate -w @sparksocial/db</code> has been run
Brand	At least one brand exists, or TC-01 creates it
Test data	<code>docs/TEST_BUSINESSES.md</code> — three businesses with answers ready to paste

Accounts you can connect today: X, TikTok, LinkedIn, YouTube, Google Business (OAuth), and Bluesky (handle + app password, no setup needed). Instagram, Facebook, Threads, Pinterest and Reddit are not configured — see `docs/VENDOR_SETUP.pdf`. Don't log those as failures.

A. Setup and publishing — G1

ID	USER STORY	DO THIS	EXPECT
TC-01	(A) As an owner I can set my brand up fast	Sign in → onboarding → answer the five questions using a business from <code>TEST_BUSINESSES.md</code>	Brand is created and you land in the app, not back at onboarding
TC-02	(A) I can connect somewhere to publish	Settings → Account Connection → connect Bluesky (handle + app password)	Tile shows connected, with your account name and picture — not "Bluesky"
TC-03	(A) I can connect an OAuth account	Connect X , TikTok or YouTube	Consent screen appears, asks which account, returns connected
TC-04	(A) I get a month of content without planning it	Create a campaign → pick an objective → confirm	Campaign is created and the calendar has posts on it
TC-05	(A) Posts go out on their own	Open a scheduled post → Publish now	Post appears on the platform; the item shows a receipt and a link

ID	USER STORY	DO THIS	EXPECT
TC-06	(A) A failed post tells me why	Disconnect the account, then publish another post	Item shows a readable reason, not a silent failure

B. Oversight — G2

ID	USER STORY	DO THIS	EXPECT
TC-07	(B) Nothing publishes without me when I say so	Settings → set approval mode to review → publish a post	Post is held , not published, and says it is waiting for review
TC-08	(B) I can approve and it goes	Approve the held post	It publishes, and the receipt appears
TC-09	(B) Autonomy is per campaign, not global	Create a post with no campaign → try to publish	Held for review regardless of mode

C. Discovery and repurposing — G3

ID	USER STORY	DO THIS	EXPECT
TC-10	(C) I can see what's worth posting about	Open Discovery	Trends listed, each with a score and a why
TC-11	(C) Off-brand trends don't clutter it	Read the list against your brand	Nothing wildly unrelated to the business appears
TC-12	(C) I can turn a trend into a post	Pick a trend → Repurpose	A draft is created, in your brand's voice, about that trend
TC-13	(C) Sources are honest about themselves	Discovery → source rail	Unconnected sources say <i>why</i> and name the variable to set

D. Automation — G4

ID	USER STORY	DO THIS	EXPECT
TC-14	(B) I can set content to keep producing itself	Automation → new recipe → auto trend → add 2–3 keywords → save	Recipe saves and appears as active
TC-15	(B) I can see what it produced	Run the recipe	Output appears in the queue, or a message saying why nothing matched
TC-16	(B) I can stop it	Pause the recipe	Status changes to paused, no new output

E. Engagement — G5

ID	USER STORY	DO THIS	EXPECT
TC-17	(D) Replies are drafted for me	Engagement → open a comment or DM → draft a reply	A reply in the brand's voice, not a generic one
TC-18	(D) I see who's ready to buy	Engagement → sales opportunities	Intent-scored items with a recommended next action
TC-19	(D) Nothing is sent behind my back	Check a drafted reply before approving	It is not sent until you approve it

F. Governance — G6

ID	USER STORY	DO THIS	EXPECT
TC-20	(B) My banned words never appear	Brand Kits → Enable Strict Compliance → add a banned word → generate a draft	The word does not appear; if it does, the post is blocked or flagged
TC-21	(B) My colours and type are used	Brand Kits → set colours and fonts → generate an image post	Rendered image uses them: first colour ground, second the text
TC-22	(A) Posts carry hashtags	Generate a draft for X or LinkedIn	Draft ends with hashtags, specific to the post — not #smallbusiness filler
TC-23	(A) Hashtags never break a platform	Generate a draft for an X playbook	At most 2 hashtags, and publishing is not blocked for having too many
TC-24	(A) I'm told what's missing <i>before</i> I commit	Create a campaign on a brand with no assets	A checklist appears before creation, splitting blockers from warnings
TC-25	(A) A watermark is my choice	Brand Kits → Watermark → turn it off → render an image	No logo stamped on the image

Known limits — do not log these as failures

THING	WHY
Instagram, Facebook, Threads, Pinterest, Reddit won't connect	No app credentials set. docs/VENDOR_SETUP.pdf
LinkedIn publishing may be refused	Platform approval is still pending; the connection itself works
Only 4 of 8 trend sources are live	YouTube, Hacker News, Product Hunt, Google Trends. Reddit/X/TikTok/Pinterest need keys
Brand kit Versioning tab says "Not built"	Correct — nothing in the product records a brand-kit version yet

THING	WHY
Copy is written by the OpenAI fallback	The Anthropic org is disabled. Quality differs slightly; it is not a failure
Aggregator publishing is off	<code>AYRSHARE_API_KEY</code> is unset; native adapters are in use

If a case fails

Record the **ID**, what you saw, and the browser console output. For a publish failure the item itself carries the reason — copy that rather than "it didn't work". Server-side detail is in the API terminal.
